"Do you remember when EA Sports "Tackle-o-Matic" was a new, innovative feature at E3 2006?" asks Pro Manager's Max Oliver.

"Pepsi got wind of the game and sued EA claiming it was an imitation of their famous "Sports Challenge" ad. EA defended themselves claiming it was a new gameplay mechanic bringing new innovation to the face of the sports title. Look at "Tackle-o-Matic." It's gone now. This technology is the future of sports games." The integration of motion capture technology gives players the best, most authentic football game experience to date. New gameplay features have been introduced to cater for the new state of the art motion capture data, and it is apparent that FIFA's developers are serious about delivering the most realistic football experience. 1) Passes and Shots These are two of the most fundamental aspects of football, and they are both now more powerful than ever. Passes and shots will react to the new HyperMotion game engine, a next-generation physics model, as well as new physical models and behaviours. 2) Complete

Gameplay Engine Never before has a sports game felt as real or as well balanced as FIFA 22. Every aspect of the game has been completely overhauled – from the new AI to the new gameplay engine. FIFA 22 has incorporated the most authentic animation possible, and it will be exciting to see what new features players will come up with to create even better passes and shots. 3) Player Impact Engine Play on the biggest of stages at the climax of a football game, as the unique physics-based Player Impact Engine will make you feel as if you are right there on the pitch. Impact Physics will handle all collisions with the player, letting you control it on either side of the ball, while the game will dictate the direction of the ball movement. 4) Proper Stamina Goalkeepers now have proper stamina, and once again are more than just a defensive tool. Being able to play the long balls, make the long sprints and stand up for challenges will open up new tactical options for the keeper, and the game engine will simulate the goalkeeper's fatigue to make the keeper's job easier. 5) Line-Grossing Dribbling FIFA 22 introduces a brand new dribbling feature, designed to add depth to the game. The dribbling
