iomega's sales pitch offered nothing that wasn't already common knowledge. with competition, its predecessor the zip 1000 presented the company with a clever and cleverly hidden marketing ploy. if it cost a fortune to make a drive, then why not sell a lower priced version of the drive and treat customers to technology that cost a fortune. drivers that supported usb 2.0 increased the speed of the zip 100 to a a maximum of 420 mb/sec. the zip 100 can be found in volumes ranging from 100 mb to 750 mb, so essentially the maximum drive size is dictated by the capacity of the drive and the version of mac os to which it is being installed. the 2.0 version is the most current, as it included a handy feature called auto backups to automatically back up your data on the external drives. the iomega zip drive is the low-cost removable storage leader--and iomega's two latest offerings, the zip 250 (a scsi device) and a usb version of the zip 100, should help maintain its popularity. the usb drive is designed for win98; you install the drivers and iomegaware software first, then reboot your system. we got it installed and performing without a hitch.we tested the scsi version of the zip 250. the 250 mb disks will sell for about \$100 for a six pack, about the same as a 10 pack of zip 100 disks. the drive works with the 100 mb disks, but sacrifices some speed in doing so.we compared both drives' performance against an internal ide zip 100 drive (0.32mbps). the zip 100 copied our files at 0.25mbps. the zip 250's scsi interface helped it achieve good speeds (0.52mbps) with a 250mb disk for which it's optimized. the performance of the zip 250 drive earns it a spot on our winlist. -- from winmag®
