Delphi Xe3 Slip File Generator Extra Quality

in the rad server for delphi 6.5.3, if i create a new project, there is no option to check the box to import the old database. i can only import the rad server for delphi 6.5 database. so i had to create a new project, and create an empty database, then copy the database over. the two databases look identical in the database designer. if i try to use the import database tool in the rad server for delphi, it says that the database is locked, and the import failed. as far as i know, the latest version of the rad server for delphi is free. if it wasnt, i would have to install the latest version on my old computer, then create a license, then copy it to the new computer. i wasnt sure if there was an easy way to import the old database. codetyphon is extremely fast in comparison to delphi. the only thing i dont like about it is that its not that user friendly. i cannot use codetyphon as a lightweight ide. i'm not sure if theres a way to do this. at least i havent found it yet. i like to use other ides because i can use gdb to debug my code, use most of the other features and i can still use lazarus to access my modules. i've been using lazarus for my projects for years now. i started using it before delphi was a thing. i'd go back to lazarus if i needed to use delphi. as for the speed, when i was using delphi 5 (or whatever was the latest version at the time) it was slow to start up (getting to a point where you could do anything). lazarus on the other hand, in my experience, will start up immediately and has no issues with switching windows quickly. like i said though, what i mean is, if you're using lazarus to program, it'll be fast, but if you're using it to do a quick edit of your code, it'll be slow. i'm still using delphi for my final development and only use lazarus for quick edits.
