File and partition recovery In case you wish to repair your system from a virus infection, update, change or defragment it, certain data can be lost, especially the settings and other applications. LogicSight Data Recovery can help you identify the files that were damaged or accidentally removed during the system reconfiguration. The software can scan and identify data on a series of storage spaces, such as local drives, external disks, USB memory devices, SD cards or other storage media. LogicSight Data Recovery can support several filesystems, such as FAT12,16 or 32,

NTFS and NTFS5. Moreover, the software allows you to set several filters in order to limit the search to the objects that interest you. File filtering, scanning and recovery

Before the software can perform the scan it prompts you to select one of the supported methods: file recovery or partition recovery.

Then, you can apply the file type filter: you may search exclusively for documents and spreadsheets, pictures, music/audio, movies/videos, applications/programs or other uncategorized files. You may select either combination of these filters, in order to limit the search to the

type of files you are looking for. The software then commences the search, indicates the evolution on the progress bar and displays the estimated time for the entire process. When the scan is finished, the software displays the results sorted into folders, in a tree structure, which is designed to help you easily identify them. Search through results and save them. Another file filter can be set when the results are displayed, that can help you identify the file by name or by size or by the date it was created. Once you have identified and selected the files you wish to recover, LogicSight Data Recovery

can help you copy the files to a secure location, preferably one that is different than the input drive. The software allows you to fix Windows registry errors and to save you from getting nasty spyware and adware. Basically, it helps you keep your system clean and secure by checking it.
