Impressive features are designed to help you create the best possible images. The best feature for image editing is probably the Content-Aware tool, which lets you easily fill in missing areas as long as the details, colors, and edges match in the other areas of the image. Multiple layers of information are displayed in the image, including the original picture, the affected area, and the mask to see where the areas match, which lets you easily restore the area you've used. For image enhancement, the most useful features are the slider controls for the saturation, hue, and luminance. The controls can be adjusted in a range, so you can treat the colors in your image as if you were coloring an artwork. Color tone adjustments also are provided that can make colors brighter and more dramatic or softer and more neutral. Image adjustments include many other useful tools such as sharpening, blemish removal, and adjustment tools. The slider controls make it easy to apply the image adjustments. And, the image preview window lets you know how the adjustment affecting that part of the image will appear on the entire image. The cleanup features enable you to remove unwanted objects, and other features enable you easily add text, convert images to black-and-white, and add a wide range of other special effects. Image adjusting features let you change the way images look. You can change any part of each image, whereas you can change just part of a cropped image with an adjustment layer.
